THE FUTURE OF TRUST

October 21, 2026

5:30 PM-9:00 PM

Central Time

The internet has shifted from a human-dominated space to one shaped by bots and AI agents that don't just generate content—they act. It's no longer just about spotting threats, but deciding who and what to trust. Using the lens of "The Internet Used to Be Mostly Human. Not Anymore," join u for an evening of great food and drinks as we explore how agentic AI is reshaping identity, authenticity, and risk. This invite-only executive dining experience brings together a small group of senior marketing, digital, and business leaders for an off-the-record conversation on what it means to lead in the agentic era. We'll unpack how the rise of AI agents is changing the modern customer journey. Attendees will gain a clear, compelling way to communicate this shift and navigate trust in an increasingly automated digital world.
