PREPARING FOR A POST-QUANTUM FUTURE

January 22, 2026
5:30 PM-9:00 PM
Eastern Time

Quantum risk is closer than you think, and is poised to disrupt today's security foundations, putting long-lived and sensitive data at risk. Post-quantum cryptography (PQC) is becoming a strategic priority for many organizations seeking to maintain trust, protect their data, and prepare for regulatory and industry shifts. Join us for an engaging dinner conversation on navigating the quantum transition.

Topics will include:

Why "harvest now, decrypt later" attacks are driving urgency
The journey from quantum risk awareness to enterprise-wide PQC planning
Key industry and regulatory developments shaping adoption timelines
How cloud-first organizations can embed PQC into modernization and security programs
