A SEAT AT THE DATA TABLE: WOMEN LEADING BFSI INTO THE AGE OF TRUSTED AI

October 22, 2026
5:30 PM-9:00 PM
Eastern Time

Banking, insurance, and financial services organizations are racing to deploy AI, but the leaders driving that race know a hard truth: an algorithm is only as trustworthy as the data behind it. Customer records scattered across core banking, lending, wealth management, policy, claims, payments, and service systems create a fragmented view of the customer. That fragmentation limits AI effectiveness, stalls personalization, slows regulatory reporting, and leaves risk and compliance teams unable to confidently govern and approve the very AI initiatives the business is counting on. As regulatory scrutiny sharpens and FinTech and InsurTech challengers build customer-centric data foundations from day one, competitive advantage in this industry is shifting from product innovation to data trust and customer truth. Trusted, governed and explainable data is becoming fundamental to competitive advantage — enabling organizations to innovate with AI while strengthening regulatory readiness, operational resilience and customer trust. This invite-only dinner, hosted by Stibo Systems, brings together senior women leaders from across banking, insurance, and financial services for an evening of direct, peer-to-peer conversation on what it takes to build that trust. It is also a night to recognize the caliber of leadership already in the room. You may be a chief data officer, chief risk officer, chief information officer, or head of governance, risk, and compliance. You are shaping how your organization governs data, manages risk, adopts AI responsibly, and earns customer confidence in the AI era, often as the first, or only, woman doing so at your level. Over dinner and candid conversation, you will trade real experience on turning fragmented, siloed customer data into a single, governed source of truth: trusted, governed customer and entity intelligence that connects identities, relationships and critical business data across the enterprise to create the foundation for responsible AI, regulatory confidence and better customer outcomes. You will also build relationships with fellow female executives that outlast the evening.
