GET HANDS-ON WITH WIZ + AWS

October 15, 2025
11:30 AM-4:30 PM

Pacific Time

Cloud security doesn't have to be complicated. Join Wiz and AWS for an interactive workshop to see how full visibility and context make securing the cloud simple. In a live AWS environment, you'll explore the Wiz platform through focused modules designed for practitioners. You'll learn how to:
See everything in one place: Instantly inventory your AWS services and workloads
Understand your environment: Explore exposure, entitlements, and secrets with intuitive dashboards
Focus on what matters: Prioritize vulnerabilities with context, not noise
Connect the dots: Visualize relationships with the Wiz Security Graph
You'll leave with:
Real experience using Wiz in AWS
Practical ways to simplify complex cloud environments
A new approach to cloud security that feels clear, connected, and collaborative
This is a hands-on lab with guided exercises and capture-the-flag challenges, built for people who learn best by doing.
