CLOSING THE CONTEXT GAP IN BFSI — DRIVING TRUSTED OUTCOMES WITH AGENTIC AI

May 20, 2026
2:00 PM-3:15 PM
Eastern Time

As BFSI organizations scale AI, many struggle to translate intelligence into trusted, real-time decisions. Fragmented data, limited context, and opaque models continue to slow adoption—creating a critical context gap between AI capability and business outcomes. This Virtual Council brings together senior BFSI leaders for a closed-door discussion on how engineering-led Agentic AI can close this gap. The session will explore how context-aware, autonomous AI agents—built on strong data foundations, observability, and governance—enable faster, more reliable decision-making across risk, fraud, compliance, and operations.

Moving beyond experimentation, participants will examine what it takes to operationalize Agentic AI responsibly in regulated environments—embedding trust, transparency, and human oversight into AI systems by design. The conversation will focus on practical architectures, leadership choices, and real-world lessons for delivering measurable outcomes with confidence.

Designed as a peer-driven executive forum—not a sales event—this Virtual Council enables candid exchange on how BFSI leaders can harness Agentic AI to drive speed, resilience, and trust at enterprise scale.
