SOLVING THE NEXT GENERATION OF APPLICATION SECURITY

August 10, 2022
5:30 PM-8:30 PM

Pacific Time

Modern applications are extremely hard to secure and protect. Micro-services, APIs and Cloud services are complex and continuously changing. Traditional security solutions that focus on building a higher wall, a deeper moat, are simply too static and too slow to respond to the pace of continuous change and attacks. Now is the time to close the divide between teams and renew the focus on application security to support the next generation of business innovation. While at Black Hat 2022, we invite you to join us, and Traceable AI, for an evening of networking, dinner and an interactive discussion on the new approach to Application and API security. It's time to bring engineering, operations, and security together for the next generation of application security.
