**BAD SHIP HAPPENS: HOW TO MITIGATE
RISK WITHOUT SLOWING INNOVATION**

October 17, 2024

5:30 PM-9:00 PM

Eastern Time

Join us for an engaging roundtable conversation about minimizing the inherent risks of software delivery without sacrificing

developer workflows or deployment speed. We'll take a close look at important internal processes and tools for minimizing risk – including progressive feature rollouts, automated monitoring, and configuration management. As experts in software delivery, you know how important it is to de-risk software releases and avoid potentially disastrous service outages. Let's discuss the best ways to release new features with confidence.

We'll hear from industry experts at LaunchDarkly about introducing new features to the market using controlled exposure and experimentation and managing runtime configuration to ensure that potential bugs don't cause costly incidents. Ensuring that releases run smoothly without sacrificing creative feature development is a higher priority than ever; this discussion will provide valuable insights on how to do it.
