THE PLATFORM YOUR AI FUTURE RUNS ON

July 22, 2026
5:30 PM-9:00 PM

Pacific Time

Did you know that the organizations winning with AI aren’t the ones experimenting with the most models - they are the ones whose infrastructure can actually support, deploy, and govern them at scale?
As AI fundamentally reshapes how software gets built, relying on fragmented tools and "bolted-on" security creates a liability that modern enterprises simply cannot afford.
This exclusive, invite-only dining experience brings together peer technology, digital, and engineering executives to unpack how to scale AI safely without the operational sprawl.
Over exceptional food and wine, we will share candid insights on how to protect your digital assets with built-in access controls and establish a single source of truth from code to production. You will leave equipped with actionable insights to turn AI from an isolated workload into a reliable, enterprise-wide capability.
Join us to toast the future of tech, because your AI roadmap shouldn't be built on a shaky foundation.

TOGETHER WITH
