AGENDA

How Technology Leaders Are Scaling Agentic Software Delivery

Executive Dinner

SPEAKERS

Olena Biletska
Head or Credit Technology Department
JSC PrivarBank

Bogdan Grigorescu
Sr. Technical Lead Engineering & Automation
Direct Line Group

Andrew Fleming
MI and Reporting EMEA Head
Deutsche Bank

Robin Aveline
Head of Cloud Architecture
Deutsche Bank

Vinayak Unnithan
Sr. Manager Generative AI
S&P Global

Heamanth Raina
Global Head of Data Management
SEB

Richard Calder
CIO
Reynolds Food Group

Ilan Brodsky
CTO
Altimetrik

Mayank Ashok
VP Data Engineering, Data Governance, & Data Architecture
JP Morgan Chase

Stephen Walters
Field CTO
GitLab

HOW TECHNOLOGY LEADERS ARE SCALING AGENTIC SOFTWARE DELIVERY

July 14, 2026
6:00 PM-9:30 PM
Western European Time

AI is rapidly reshaping the software delivery lifecycle, with agentic AI creating new opportunities to accelerate development, improve productivity, and reduce operational complexity. As these capabilities become increasingly autonomous, technology leaders must also address critical questions around governance, security, accountability, and human oversight. This executive engagement will explore how organizations are approaching the next phase of AI-enabled software delivery. Discussion will focus on where AI agents can deliver the greatest business value across the SDLC, the risks leaders must mitigate as autonomy increases, and how CIOs, CTOs, and engineering leaders are establishing governance models that balance innovation with control. Join your peers to exchange perspectives on scaling AI responsibly while preparing teams, processes, and technology for the future of software delivery.
