CVISION INTERNATIONAL

AGENDA

The 1st Cloud Runtime Security Summit
CADR:CON

SPEAKERS

Dr Chase Cunningham
VP of Cybersecurity Market Research
G2

Shauli Rozen
CEO and Co-Founder
ARMO

Jim Rutt
CIO/CISO
The Dana Foundation

Ray Lipps
CISO
Citrix

Sanjay Ramchandani
VP, Data & Integration
Wells Fargo

Apurva Chokshi
Director IT
IQVIA

Daryl Martis
Director of Product Management - Einstein AI
Salesforce

Robert Essig
Client Executive
Marsh

Asif Ahmad
VP Infrastructure Security Manager
Oak Hill Advisors

Jorick van der Hoeven
Head of Data & Analytics
Revolut
Srini Masanam
Global Head of Data Quality
Citi

Namrata Shah
Managing Director - Global Head of Engineering - Investment Technology
Nuveen

Hardik Mehta
Head of Cyber Risk Management
Uber

Barbara Kissner
CIO
Segal

Ben Sondgeroth
VP of Security Architecture
Morgan Stanley

Chunpo Yang
VP, IT
Bank of China, USA

Margaret Morton
Program Director GRC & Cyber
Crédit Agricole CIB

📅 **April 16, 2025**

Eastern Time

Welcome & Registration

8:30 AM-9:02 AM

CHAIR

Opening Remarks

9:00 AM-9:15 AM

CHAIR

KEYNOTE

9:15 AM-9:40 AM

## A New Era in Cloud Runtime Security: Cloud Application Detection & Response

Detecting and responding to cloud attacks has never been more challenging. Modern attacks and the ever-changing nature of cloud infrastructure and applications make security teams' lives more difficult than ever. A new approach is needed - one that can provide a fully traceable & explainable runtime security story spanning the entire cloud technologies stack.

**CHAIR**   **PANELISTS**
Shauli Rozen
CEO and Co-Founder
ARMO

VISION VOICES

9:45 AM-10:20 AM

From Posture to Protection: Why Runtime Is the Heart of CADR

Posture identifies risk, but only runtime detects and stops real threats. Without a presence in runtime, detection is incomplete, and response is impossible. This talk breaks down why runtime is the heart of CADR, ensuring real-time visibility, detection, and action to protect cloud workloads where it matters most.

Networking Break

CHAIR

The Modern CISO Strategy and Priorities: Protecting Cloud Infrastructures and Applications Against Modern Attacks

In recent years, we have added more and more tools to protect our cloud infrastructures and applications , but are we really more secure?
Traditionally, we started with the cloud security posture, but was that the right move?

The cloud security market has grown and changed significantly - from CSPM, to ASPM and CNAPP. It seems that every few months a new category is popping up. But what is still missing? Where should we focus next? posture or runtime? shift left or protect right?
