THE RISK VS. REWARD OF GENERATIVE AI: SECURING YOUR MOST SENSITIVE DATA

September 19, 2023
6:00 PM-9:30 PM
Central Time

Security and technology leaders, from the boardroom to the war room, are grappling with the potential security risks that generative AI represents. Yet despite the potential for leaking sensitive data, business leaders recognize that they must find a way to harness the transformative power that the technology represents. Join this Chicago C-Vision Think Tank on September 19th, to gather with local technology leaders for an intimate dinner and interactive discussion hosted by Cyera and Netskope. We will discuss the strategic risk-management challenges enterprises are facing with the adoption of generative AI, and how to effectively manage this generational shift. Moderated by Nelson Soares of C-Vision, the discussion topics will include: The strategic impact generative AI is having on enterprises, and discuss the risks and rewards the technology represents Technologies that allow security leaders to harness the positive potential while mitigating the most damaging risks The technology management principles that should be embraced to advance enterprise innovation and business transformation
