# AGENTIC PROCESS TRANSFORMATION: UNLOCKING ENTERPRISE-SCALE AI IN CPG, RETAIL & LOGISTICS

**September 23, 2026**
6:00 PM-9:30 PM
Central European Time

Most enterprises have already proven AI works in theory - pilots are validated, and the technology has earned its seat on the executive agenda. Yet scaling AI across supply chain, commerce, and daily operations remains a persistent bottleneck.

The gap between experimentation and enterprise execution is no longer a technical challenge; it's a competitive divide. Market leaders aren't launching more tests - they are embedding Agentic Process Transformation (APT) directly into core functions like demand planning, fulfillment, and autonomous commerce to drive immediate, measurable ROI.

Join AWS and Infosys in Paris for an exclusive executive roundtable with senior CPG, Retail, and Logistics leaders. The session will feature an inside look at a joint Infosys-AWS Agentic AI initiative for a major global logistics leader, highlighting how multi-agent architectures resolve complex supply chain friction. Together, Infosys and AWS will present battle-tested frameworks for embedding Agentic AI where it matters most: core business operations. Connect with industry peers and shape the future of enterprise AI. Register today to reserve your spot.
