

# AGENDA

## Cloud Security **CISO Dinner**

### SPEAKERS

**David Levine**  
VP Corporate & CSO  
Ricoh Americas  
Corporation

**Deena Swatzie**  
SVP, Corporate  
Cyber Strategy  
Leader  
Truist

**Kelvin Arcelay**  
SVP, Information  
Security & IT Risk  
Management  
EVO Payments  
International

**Ray Strubinger**  
Director Information  
Security  
Global Payments Inc.

**Tyler Agypt**  
Director of Strategic  
Initiatives  
Checkmarx Inc.

**CLOUD SECURITY**

**March 28, 2022**

5:30 PM-9:00 PM

Eastern Time

According to Gartner 79% of companies have experienced at least one cloud data breach during the pandemic. Remote work is here to stay, and the concept of securing a perimeter has essentially ended. Traditional application security measures are broken. The need to innovate faster and shift to cloud-native application architectures isn't just driving complexity, it's creating significant vulnerability blind spots also.

Under the thumb of the pandemic, enterprises and IT leaders had to look for tech solutions that were resilient and agile to empower the remote workforce. To sustain business continuity plans, organizations shifted workloads to the cloud. As much as cloud adoption offers flexibility and productivity, it also exposes organizations to cyber threats and data breaches. So the question remains if moving to the cloud is the right thing to do and if so how to protect it from the new risks given that most organizations believe that application security should be completely automated to keep pace with dynamic clouds and rapid software development practices.
