Where Technology Leaders Think Big National Summit

SPEAKERS

Nicholas Colisto
SVP & CIO
Avery Dennison

Jeff Marshall
Global Deputy CIO & NA CIO
Havas People

Milind Buddhikot
CTO, North America Markets (NAM), Enterprise Campus Edge (ECE) Solutions
Nokia

Mitesh Shah
CDO
CardWorks

Randy Cleghorne
CIO
Goodwill Industries of Greater NY and Northern NJ, Inc.

Rod Aday
CISO
Bank of China, USA

Robert Rijos
CIO
Konica Minolta Healthcare Americas, Inc.

Santosh Kumar Yamsani
Global Head of Enterprise Core & Platform Engineering
BNY

Umang Nagpal
Exec Director, Global Technology Product Portfolio Operations
JPMorganChase

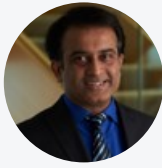

Dhouglas Carvalho
VP Delivery Lead - Horizontal Portfolio Governance
Bank of America

Cong Fang
Head of Liquidity Risk Oversight
Mzuho

Donald Shkembi
CISO
DZ Bank AG

Deepak Gaikwad
Head of Data & AI Products
PNC Bank

Sunny Zhu
Head of Data & Analytics
Indeed

abdul hafeez shaik
Head of Data & AI Platform and Data Analytics
Natera

Yabing Wang
CISO
Justworks

Beatrice Sirchis
FVP Head Application Security
IDB Bank

Nawaz Alli
Director, Technology (CIO)
Wafra

Jake Bernardes
CISO
Anecdotes AI Ltd

Barbara Kissner
Chief Information Officer
Segal

Gilad Globen
CTO
American Exchange Group

Ran Harel
AVP of Security Products
Semperis

David Sans
CIO
D Boral Capital

Ryan Chow
SVP Security
People Inc.

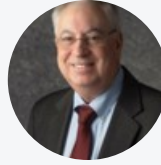

Stephen Alford
CIO
Worldwide Environmental Products

Sri Kongara
Head of Data Governance
TradeWeb Markets

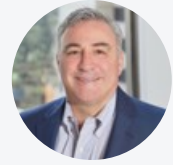

Jay Haque
Senior Director, IT & Cybersecurity
New York Public Library

David Finkelstein
CIO
RiverSpring Health

Ashwin Krishnan
Founder and Host
StandOutIn90Sec

Tony Parrillo
Global Head of Security
Schneider Electric

Stanislav Rosenberg
Senior Director of Strategic Intelligence
Reed Smith

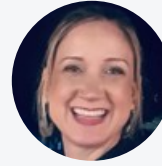

Galo Vaca
CISO
Northfield Bank

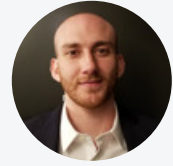

Ibrahim Jackson
Founder & CEO
Ubiquitous Preferred Services

Melissa Ouari
VP and CISO
Money Management International

Margaret Morton
VP, Cybersecurity
Waterfall Asset Management LLC

Alaa Moussawi
Chief Data Scientist - CDO
New York City Council

Talvis Love
Group Chief, Information & Digital Officer
National Grid

Ruth Hubbard
Director, Data Product Strategy & Partnerships
Fiserv

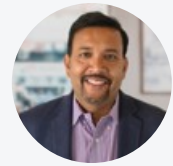

Bharat Amin
Retired EVP and CIO
Huntington Ingalls Industries

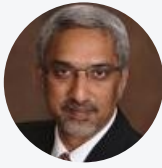

Gopichand Mannava
Chief Data Architect
State of Connecticut

Julie Luengas
CNIO
Stony Brook Medicine

Sugato Bose
Chief Enterprise Architect
Medline Industries

Satyan Penmetsa

CTO
Fortipi

Dominic Forrest

Chief Technology Officer
iProov

Sohail Iqbal

CISO
Veracode

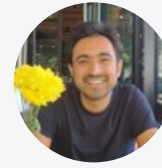

Paul Cao

Global Head
Enterprise Data Platform
Wells Fargo

Chris Blackburn

CEO & Founder
Liatro

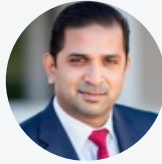

Ashu Savani

Co-Founder
TryHackMe

Nils Puhlmann

CISO & Startup
Advisor
Self-employed

Kiran Bhujle

MD, Global Head of
Cyber
SVAMInternational

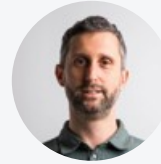

Jean-Claude Lukunku

VP & CIO
CIC

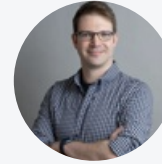

Sundari Parekh

Global Deputy CISO
TrendAI

Aaron Zollman

VP & Deputy CISO -
Gaming
Microsoft

Seth Blank

Co-Founder and
CEO
Backplanes

Jim Haynie

CIO/CISO
New England IT
Security Consortium

Digital Inside Out: Overcoming the Mid-Tenure CIO Plateau

Many CIOs successfully stabilize systems and deliver early wins, only to find their influence plateauing just as the business expects more. Based on insights from his book "Digital Inside Out", Nicholas Colisto explores the critical mid-tenure inflection point where technology leaders must shift from managing platforms to shaping business outcomes. Attendees will leave with a practical perspective on leading digital transformation from the inside out, turning external market signals into lasting organizational impact.

The Regulatory Myth: Forcing AI Velocity in High-Stakes Industries

Regulatory compliance, data sovereignty, and systemic risk are the ultimate excuses used to stall production-level AI. But while some organizations hide behind guardrails, industry trailblazers are weaponizing them to move faster.

This session unites elite technology executives across Financial Services, Healthcare, Energy, and Retail to debunk the "highly regulated" bottleneck. Discover how market leaders are aggressively forcing core modernization, protecting critical infrastructure, and scaling autonomous workflows without tripping over strict compliance parameters

CHAIR

Ibrahim Jackson

Founder & CEO

You Can't Govern What You Can't See: Building the Identity Graph for the Agentic Era

Legacy Identity Governance and Administration (IGA) was built for a static world, leaving a massive visibility gap across human identities, non-human accounts, and autonomous AI agents. As enterprise environments scale, traditional tools struggle to keep up with fragmented access across hybrid ecosystems. In this session, Vijay Vattikuti explores how a unified, real-time identity graph closes the governance gap.

Attendees will discover how to layer continuous visibility over existing incumbent tools, or replace them entirely, to secure every human and machine identity across the modern enterprise.

Networking Break

Leading Through Turnarounds, Risk, and Corporate Friction

True enterprise resilience is forged in moments of extreme friction. From orchestrating one of the most stunning operational turnarounds in Silicon Valley history as a chief executive to governing global giants on major tech and telecom boards, our featured speaker has mastered the art of leading on their own terms.

In this high-impact session, they will bridge the gap between macro-level corporate governance and strategic execution. Technology leaders will walk away with a concrete blueprint for navigating institutional risk, breaking through organizational plateaus, and architecting the intentional leadership stack required to drive velocity in an unpredictable market.

12:15 PM-1:00 PM

AppSec in the GenAI Era: Real-World Risks, Ownership, and Autonomous Code

Generative AI is accelerating software development faster than ever, leaving security teams with a critical question: are we actually shipping features faster, or are we just piling up security debt at scale? Without the right guardrails, code generated by AI frequently introduces vulnerable patterns and unverified dependencies straight into enterprise pipelines.

Join Veracode's CISO alongside industry security leaders for an honest, practical discussion on moving past the AI hype, managing real-world risk, tracing code provenance, and establishing clear accountability when machines write the code.

Building Beyond the Enterprise Playbook

Enterprises often ask teams to innovate while still requiring them to follow the same approval chains, delivery processes, and technology decisions that slow change. Capable people can see a better way forward, but they rarely have the freedom to try it. In this talk, Chris Blackburn, founder and CEO of Liatrío, shares an approach shaped by more than a decade of work with complex enterprises: build a small team outside the organization's usual constraints. Give that team a clear problem, the authority to make decisions, and room to work differently. Then let the results challenge the rules the enterprise has come to accept.

Join Chris for a roadmap to giving teams the space to prove a better approach, then using that proof to change the decisions and structures that determine how the wider enterprise works.

2:00 PM-2:45 PM

Before You Automate: Governance, Trust and the Mechanics of Successful AI Implementation in the SOC

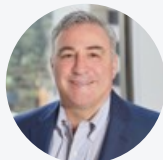

Everyone's talking about AI in security, but we're overlooking a crucial question on the mechanics of successful implementation: can AI actually force-multiply the security team once the pilot's finished? In this session, practitioners get honest about the pragmatic aspects of getting AI to work reliably in the SOC. It starts with governance: who owns AI decisions and how the guardrails get set before anything ships. Then choosing the right use case: telling an impressive demo apart from real impact. Next, the reality of deployment: how pilots get validated, how success is measured, and where it commonly fails. And finally culture and buy-in: getting analysts to trust and adopt AI-assisted workflows rather than work around them. These four decisions can determine whether automation transforms a team or frustrates it, but teams risk making them by default rather than by design.

2:50 PM-3:35 PM

Non-Human Identities (NHIs) - Governing Enterprise Data Flow in Agentic AI

Human users are no longer the primary actors moving enterprise data. As agentic AI workflows automate multi-step operations, non-human identities (NHIs), autonomous agents, and service accounts interact directly with core data repositories 24/7. This session explores how Data and AI leaders can build scalable governance frameworks for NHIs - ensuring autonomous agents access, retrieve, and process enterprise data safely without creating operational friction or corrupting data integrity.

DISRUPTOR

3:35 PM-3:50 PM

Beyond GenAI: From Productivity Gains to Business Transformation

Many organizations have seen early gains from generative AI, but the next challenge is translating those gains into meaningful business transformation.

This discussion focuses on how leaders are moving beyond isolated use cases to embed AI into core business processes, while balancing innovation with governance, risk, and long-term sustainability.

Gen-AI Unleashed: Unified Data, Governance, and Portability for the Next Era of Enterprise AI

As generative AI reshapes the enterprise landscape, leaders face new challenges—and opportunities—in harnessing the full power of their data. Join us for an exclusive executive dinner to explore how unified data access, robust governance, and cloud-portable architectures are accelerating the adoption of Gen-AI across industries.

AI-Technostress: Overcoming the Fear of Being Replaced

As AI automates routine tasks, teams face severe burnout from shifting toolsets and "techno-insecurity" - the anxiety that machine reliance is eroding human critical thinking.

This session gives IT leaders a blueprint to navigate this disruption, share strategies for tech role design, and ensure AI enhances human value rather than driving team disconnection.
