C VISION INTERNATIONAL

AGENDA

From AI Infrastructure to Intelligent Execution

Symposium

SPEAKERS

Ibrahim Jackson
Founder & CEO
Ubiquitous Preferred Services

Eddie Dang
Director Technology
AT&T (1)

David Sans
CIO
D Boral Capital

Scott Magee
Sr. Director, Customer Value
Smartsheet

Sanjay Ramchandani
Sr. Director Data & AI
PepsiCo

Joseph Smith
Vice President - Platform Engineering Excellence and Transformation
Broadridge

Varun Adibhatla
CTO
NYC School Bus Umbrella Services

Sudipt Kapadia
Director of Financial Services, Solutions Architecture, North America
AWS

Anshuman Mukherjee
Audit Director, Quantitative Analytics & AI/ML
Freddie Mac

Milind Buddhikot
CTO, North America Markets (NAM), Enterprise Campus Edge (ECE) Solutions
Nokia

Peter Smode
Senior Vice President I Application Owner Azure Cloud Enablement
JP Morgan Chase

Lunch & Registration

1:00 PM-2:00 PM

Opening Remarks

2:00 PM-2:15 PM

KEYNOTE

2:15 PM-2:45 PM

From AI Experimentation to Enterprise Scale: Building a Governed Foundation for Agentic AI

The next phase of enterprise AI is moving beyond isolated copilots and experiments toward AI systems and agents capable of reasoning, accessing organizational knowledge, and taking action across business processes. For enterprise leaders, that creates enormous opportunity, but also new requirements for security, governance, observability, data access, and control.
This session will explore what organizations need to move AI from proof of concept to secure, scalable production. An AWS thought leader will examine the architectural and governance principles behind enterprise AI and agentic systems, including how organizations can connect models to trusted enterprise knowledge, manage agent access and identity, establish appropriate guardrails, and create an AI foundation that can safely extend across teams and use cases.

SPEAKER

Sudipt Kapadia

Director of Financial Services, Solutions Architecture, North America

AWS

KEYNOTE

From AI Activity to Business Outcomes: The New Era of Intelligent Work Management

AI adoption is accelerating, but enterprise execution remains fragmented. Teams are experimenting with AI while still managing priorities, dependencies, approvals, resources, and critical initiatives across disconnected systems. The result can be more intelligence without greater organizational velocity.

This session will explore how Intelligent Work Management can close the gap between AI insight and business execution by connecting people, data, workflows, and AI within the context of how work actually gets done. Attendees will learn how organizations can use operational context to surface risk earlier, coordinate work across functions, maintain human oversight, and measure AI's impact against real business outcomes—not simply productivity gains.

AI Without Chaos: How to Bridge Your Execution Gaps with Governed Intelligent Work Management

Enterprise leaders face a critical paradox: they're investing heavily in AI infrastructure, but 74% of digital transformations still fail due to cross-system execution gaps, not strategy. The average knowledge worker now switches between 11 enterprise apps daily, yet most organizations have no unified way to see work status, track dependencies, or orchestrate handoffs across these systems.
Here's the deeper challenge: most AI tools treat each interaction as a blank slate. They see a snapshot of data, not the living record of how work actually gets done. That missing piece is context, the rich, operational intelligence embedded in structured work: every sheet built, every form submitted, every workflow triggered, every approval signed. When AI lacks this kind of context, it can't truly understand what matters or what's at stake across your business.

CHAIR

Ibrahim Jackson
Founder & CEO
Ubiquitous Preferred Services

PANELISTS

Scott Magee
Sr. Director, Customer Value
Smartsheet

Sudipt Kapadia
Director of Financial Services, Solutions Architecture, North America
AWS

Anshuman Mukherjee
Audit Director, Quantitative Analytics & AI/ML
