FIRST MOVERS WIN IN THE AI ERA: IMPLEMENTING HIGH VELOCITY AND AI AUTOMATION IN OPS

July 09, 2026
5:30 PM-9:00 PM
Pacific Time

This exclusive engagement is crafted around peer conversation for technology executives who are considering the best approach to implementing and realizing the value of agentic-first ops. AI-powered, multi-agent approaches are emerging as a way to help organizations manage growing operational complexity across diverse data environments. By working alongside existing tools, these systems aim to streamline decision-making, reduce alert noise, and improve response times, while enabling SRE, DevOps, and Security teams to maintain control as production environments continue to evolve.
It's more important than ever to accelerate and be a first mover without waiting for the perfect AI strategy. Allow your teams to build velocity in a secure and scalable manner to unlock learning and iteration after every deployment. Engage and strategize with other technology leaders within an intimate setting to successfully widen the gap from your competition.
