**FROM AUTOMATION TO AUTONOMOUS
OPERATIONS: HOW MANUFACTURING
LEADERS ARE DRIVING PRODUCTIVITY,
RESILIENCE AND GROWTH WITH AGENTIC AI**

October 01, 2026

6:00 PM-9:30 PM

United Kingdom Time

Manufacturers have invested heavily in automation, analytics and AI, yet many critical decisions still depend on fragmented systems and manual coordination. As volatility becomes a permanent operating condition, organizations need more than visibility. They need the ability to anticipate, decide and act at scale. As manufacturers gain greater visibility and intelligence through connected operations, industrial data and Physical AI, the next challenge is turning insight into coordinated action. Agentic AI is emerging as the foundation for adaptive operations, enabling enterprises to orchestrate decisions across manufacturing, supply chain, procurement and service functions while improving productivity, resilience and responsiveness. This executive roundtable will bring together senior operations and supply chain leaders to explore how leading organizations are transforming operational intelligence into business action and moving toward autonomous, outcome-driven operations.
