STATE OF THE AI SOC: SIGNALS FROM THE FRONTLINES

November 05, 2026
6:00 PM-9:30 PM
Eastern Time

Managed detection and response is now a multibillion-dollar market, and nearly every SOC is piloting AI, yet many teams still triage alerts by hand and miss alerts that later matter. Something isn't adding up. Over dinner, we'll share what security leaders and real-world deployments show about AI in the SOC: where it's delivering, where it isn't, and why the real debate has shifted from whether the AI is accurate to who owns the failure when it's wrong. Come ready to compare notes on your own experiences. Questions to start us off: What have you handed to AI, what are you holding back, and does anyone's MDR contract answer the accountability question?
