A New Era in Cloud Runtime Security: Cloud Application Detection & Response

Detecting and responding to cloud attacks has never been more challenging. Modern attacks and the ever-changing nature of cloud infrastructure and applications make security teams' lives more difficult than ever. A new approach is needed - one that can provide a fully traceable & explainable runtime security story spanning the entire cloud technologies stack.

PANELISTS

Shauli Rozen
CEO and Co-Founder
ARMO

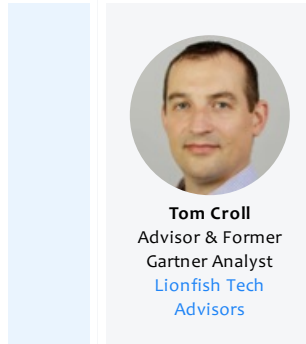

VISION VOICES

9:45 AM-10:20 AM

Bridging the Gap: From CNAPP to CADR – Securing Cloud-Native Applications End-to-End

In today's dynamic cloud landscape, organizations face an ever-expanding array of security challenges that span from development environments to full-scale cloud deployments. This session will explore the evolution of cloud security by examining how traditional Cloud-Native Application Protection Platforms (CNAPP) are being enhanced with advanced Cloud Application Detection and Response (CADR) capabilities. Attendees will gain insights into how these integrated frameworks provide comprehensive, end-to-end protection—bridging the gap between proactive risk management and real-time threat mitigation.

Networking Break

10:20 AM-10:40 AM

CHAIR PANELISTS

PANEL

10:40 AM-11:25 AM

The Modern CISO Strategy and Priorities: Protecting Cloud Infrastructures and Applications Against Modern Attacks

In recent years, we have added more and more tools to protect our cloud infrastructures and applications, but are we really more secure?

Traditionally, we started with the cloud security posture, but was that the right move?

The cloud security market has grown and changed significantly - from CSPM, to ASPM and CNAPP. It seems that every few months a new category is popping up. But what is still missing? Where should we focus next? posture or runtime? shift left or protect right?
