REINVENTING BUSINESS WITH AGENTIC AI

May 13, 2025
5:30 PM-9:00 PM
Central Time

Join us for an intimate evening of conversation and cuisine with industry leaders about reinventing the way business works with agentic AI. As agentic AI begins to move from experimentation to enterprise adoption, it's no longer about automation alone—it's about transformation. With 82% of organizations planning to adopt AI agents within the next one to three years—for tasks ranging from email and code generation to insights and decision-making—the question is, what comes next? As AI agents evolve, enterprises must rethink how they design workflows, structure teams, and adapt decision-making processes to accommodate autonomous AI that learns, adapts, and acts in real-time. This discussion will explore how businesses can harness the power of agentic AI while maintaining control, from reimagining digital operations to enabling an AI-augmented workforce. Let's explore the future of adaptive enterprises together—where human ingenuity and agentic AI combine to drive bold innovation.
