AGENDA

Brains Need a Backbone: Databases for the GenAI Era

Executive Dinner

SPEAKERS

Muthukumar Devadoss
Director, Information Security
TradeWeb Markets

Trista Huang
SVP Technology & Analytics
BRE Hotels & Resorts - Blackstone's

Louie Celiberti
Founder & CEO
E27 Technology Solutions

Sigal Gino
Director Cloud Engineering
WPP Media

Tom Yang
Director, Engineering
NBCUniversal

Viktoriya Smith
SVP
Citi

Ibrahim Jackson
Founder & CEO
Ubiquitous Preferred Services

Wim Verleyen
AVP Data Science, Research and Development
Humana

Nikit Assudani
VP Multi-Cloud Product & Risk Delivery Manager
JP Morgan Chase

BRAINS NEED A BACKBONE: DATABASES FOR THE GENAI ERA

July 22, 2025
5:30 PM-9:00 PM

Eastern Time

Databases are fundamental to AI applications, providing the critical infrastructure for managing the vast volumes of structured and unstructured data that power intelligent systems. As organizations look to streamline the development and deployment of generative AI agents, new innovations are emerging to simplify and accelerate this process. These include tools for secure large language model (LLM) hosting, real-time vector processing, efficient unstructured data ingestion, and customizable agent frameworks. Enhanced data workflows and built-in operational safeguards allow developers to build scalable, responsive AI applications with greater confidence and control.
