SUPPLY CHAIN AND THIRD-PARTY RISK

September 12, 2022

5:30 PM-9:00 PM

Eastern Time

If your organization is like most, you're conducting and answering third-party/supplier/vendor risk assessments to mitigate supply chain risk, but it's a manual, costly, and a highly-inefficient task. Assessing risk extends across IT, OT, ICS, and embedded systems that demand ongoing assessments and compliance, but often these assessments are "set it and forget it." In a best-case scenario, they're completed when a supplier is onboarded and refreshed quarterly or even annually, leaving an organization at risk most of the year. We live in an age where automated cybersecurity assessments across the supply chain are within reach. Join us for a roundtable discussion to share your insights regarding industry advances around enabling automated, trust-based data sharing in supply chains to mitigate third-party risk. We'll explore automation possibilities to address the ever-increasing regulatory compliance needs around supply chain risk and SBOM requirements.
