GENERATIVE AI FOUNDATIONS: DATA, SECURITY & INFRASTRUCTURE

October 27, 2025
5:30 PM-9:00 PM
Eastern Time

Generative AI is reshaping how enterprises innovate, but its success depends on strong foundations: trusted data, secure workflows, and scalable infrastructure. Without these building blocks, pilots remain limited, risks increase, and value is lost. This dinner brings senior IT leaders together to exchange perspectives on how to move from experimentation to enterprise impact. The discussion will highlight practical steps to establish reliable data ecosystems, embed security by design, and build flexible infrastructures. Participants will also have the opportunity to share best-use cases, learn from peers, and explore strategies that ensure AI delivers measurable business outcomes and organizational trust.
