The Future of AI

AI Think Tank

SPEAKERS

Sara Mehrabi
VP Data & Analytics CDO
COWI

Maria Christiansen
Head of Applied AI, Finance
TDC NET

Sebastian Sbirna
Head of Data Governance
Novo Nordisk

Arvind Chigateri
Chefkonsulent - Data & AI Governance
HOFOR

Isabel Quintero
Deputy CPO/CTO
inpay

Lena Jensen
Associate Director, Digital, Date & IT
Novo Nordisk

Registration	**8:30 AM-9:00 AM**
Morning Networking	**9:00 AM-9:30 AM**

Opening Remarks

9:30 AM-9:40 AM

KEYNOTE

Built on Trust. How One of the World's Most Digital Societies Can Lead the AI Era.

9:40 AM-10:05 AM

Danes file taxes, receive official mail, sign documents and reach their doctors through public digital services much of the world is still trying to build, and the United Nations has ranked Denmark first in its E-Government Survey for years. Behind those systems sits something harder to copy than technology, a deep and well earned trust between citizens, companies and institutions.
This opening keynote asks how that trust can become a competitive advantage in the age of AI. What it takes to deploy AI that people accept rather than fear, how transparency and thoughtful design protect a reputation built over decades, and why the organizations that treat trust as infrastructure may move faster than those that treat it as a constraint.

KEYNOTE PANEL

Freedom to Leave. Could Your Company Switch AI Providers in Thirty Days?

10:10 AM-10:55 AM

Here is a simple test for any AI program. If your main model provider doubled its price, changed its terms or could no longer keep your data where your customers expect it to stay, how long would it take to move? For many organizations the honest answer is months, because prompts, evaluations, fine tuning and workflows were all built around one vendor without anyone deciding that on purpose. For Nordic organizations the question runs deeper still, as customers and regulators ask where data is processed and as the region invests in AI computing capacity of its own.
This keynote panel treats portability as a discipline rather than a hope. Our panelists share how they run switching drills, which parts of the stack they insist on owning, the contract clauses that protect their exit, and how they balance the convenience of one provider against the freedom to leave.

Coffee Break

10:55 AM-11:15 AM

PANEL

Lean and Exact. Why Nordic Leaders Are Choosing Smaller, Specialized AI.

11:15 AM-11:40 AM

The race for ever larger models makes the headlines, but inside many Nordic life sciences, energy and shipping companies a quieter story is unfolding. Smaller models trained for a single domain are proving faster, cheaper and easier to govern, especially for scientific and numerical work like forecasting, pricing, risk and molecular research, where a confident guess is worse than no answer at all.
Our panelists share where they swapped the giant for the specialist, what it did to accuracy and cost, and how to decide which problems truly need the biggest brain in the room.

PANEL

11:45 AM-12:15 PM

Extra Time Is Not Free Time. Nordic Readiness for the AI Act Before December 2027.

Europe pushed back the AI Act's high risk obligations, giving organizations until December 2027 for many standalone systems. It would be tempting to exhale. The leaders on this panel argue the opposite. Classifying systems, documenting data, building human oversight and preparing for assessment takes far longer than a calendar suggests, and the transparency duties are already live.
Our panelists share how they are using the extra time wisely, which systems they are prioritizing, and how responsible AI practice is becoming a reason European customers choose them rather than a burden they carry.

VISION VOICES

12:20 PM-12:45 PM

Who Owns Your Face? Synthetic Media in the Country Rewriting Likeness Rights.

Companies are using AI to create digital spokespeople, cloned voices for customer service and avatars of their own executives and employees. At the same time Denmark is moving to give every person rights over realistic digital imitations of their face, voice and movements, an approach the rest of Europe is watching closely.
This session explores what that means for organizations that use synthetic media. How to gather real consent from employees, talent and customers, what to do when someone asks for their likeness back, and how to protect your own leaders from deepfakes while using the same technology responsibly yourself.

Lunch

12:45 PM-1:45 PM

FIRESIDE CHAT

1:45 PM-2:20 PM

Data Without the People. Synthetic Data in the Land of the Health Registries.

Some of the most valuable data in the enterprise is the data you are not allowed to touch. Patient records, customer conversations, fraud cases, the rare failure that happens once a decade. Synthetic data offers a way through, realistic records that carry the patterns without the people. In a country famous for its national health registries, the opportunity is enormous, and so is the responsibility under Europe's strict data protection rules.
This fireside chat separates the promise from the pitfalls. Where synthetic data is already speeding up projects in regulated industries, how to prove it is both useful and truly private, and what happens to models that learn too much from machine made examples and too little from the real world.

DISRUPTOR

2:25 PM-2:45 PM

When Agents Talk to Agents. Setting the Rules of the Conversation Before It Starts.

Your agents are starting to call tools, negotiate with other systems and hand tasks to agents built by partners and vendors. Behind every one of those conversations sits a new layer of protocols and connectors that most enterprise architectures never anticipated.
This session demystifies the emerging standards that let agents work together, and shows how to adopt them with clear rules for trust, logging and accountability from the very first day.

PANEL

2:50 PM-3:30 PM

From Lab Bench to Wind Farm. Physical AI and the Machines Moving Nordic Industry.

Most of the AI conversation has lived on screens, in chat windows, documents and dashboards. The next chapter steps into offshore wind farms, ports, pharmaceutical plants, warehouses and hospitals. World models help machines understand space, time, cause and effect, so robots and autonomous systems can rehearse an action before they take it.
Our panel explores where physical AI is already creating value across the Nordics, what it demands from data and infrastructure, and how leaders prepare their operations, safety teams and people for machines that move.

Networking Break

3:30 PM-3:50 PM

FIRESIDE CHAT

3:50 PM-4:35 PM

Before the Experts Retire. Keeping a Lifetime of Nordic Know How in the Building.

Every organization has a few people who simply know. The engineer who can hear when a machine is about to fail, the underwriter who senses a bad risk before the numbers show it, the operations lead who remembers why a rule was written twenty years ago. Much of what they know was never written down, and many of them are approaching retirement.
This closing conversation explores how leaders are using AI to listen to, record and preserve that expertise while those experts are still in the building. How to invite people to share what they know rather than feel replaced by it, how to turn stories and judgment into something a new colleague or an agent can learn from, and how to honor the people whose wisdom built the company.

Closing Remarks & Raffle Giveaway

4:35 PM-4:45 PM

Cocktail Networking

4:45 PM-5:30 PM
