VISION KEYNOTE PANEL

Bridging the Gap Between IS/IT and the Business

10:40 AM-11:25 AM

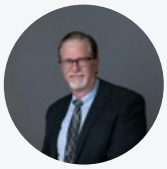

Bridging the gap between business and technology is not easy and requires discipline and balance between technology, people, and the business. For so many organizations today, technology is the business. Technology needs to be understood as a critical enabler in every part of the organization from the front line to the back office. It creates new value by crunching data to deliver new insights, it spurs innovation, and it disrupts traditional business models.
For business and technology leaders alike, new actions and behavioral changes can help their organizations make this shift. CIOs must take responsibility for problems, they should convey that when technology fails, many people typically share responsibility.

Transforming Human Processes to Mature Your Enterprise Automation (aka making AI, Zero Trust, and all the other cool toys work better)

11:30 AM-11:45 AM

Intelligent automation is a key component of digital transformation, which can help companies increase productivity levels by deploying automation into their key business areas. Intelligent automation includes core technologies that integrate with existing business processes, such as robotic process automation (RPA), machine learning, AI, and cognitive automation. Let's discuss
Why can’t I just automate as is?
Why can’t I just buy an app for that?
Isn’t AI supposed to be “Intelligent”?

PANELIST

Mike Madero

11:50 AM-12:05 PM

Threat Intelligence

Ransomware attacks are becoming increasingly prevalent and sophisticated, affecting businesses and individuals in all sectors. In 2023, these attacks are expected to continue to grow, resulting in significant financial losses, data theft, and reputational damage. Businesses should implement comprehensive security measures, including regular backups, employee training, and endpoint security, to minimize the risk of a ransomware attack. Additionally, it's important to have a response plan in place to minimize the impact of an attack if it does occur.

The Road to an Optimal Zero Trust Strategy

Disappearing perimeter, expanding attack surface, inevitable breaches, and the acceleration of digital transformation pose an increasingly complex challenge for organizations of all sizes. The Zero Trust framework provides a blueprint to secure data and networks in today's multi-cloud environment, but the path to get there remains fragmented and challenging.
Join us to discuss
Why establishing trusted Phishing Resistant identities across users, devices, apps, and workloads is critical to a strong foundation for an optimal Zero Trust strategy
Use Case Strategies against a Zero Trust Framework
How you can build a roadmap to implement an optimal Zero Trust framework for your organization, to protect against threats today and in a Post Quantum (PQ) future

The Promising Future of Artificial Intelligence (AI): Opportunities and Challenges Ahead

The potential of Artificial Intelligence (AI) is vast, as it is now being utilized across all industries. With the combination of machine learning, AI has made significant improvements in the field of cybersecurity. Automated security systems, natural language processing, face detection, and automatic threat detection are some examples of how AI is revolutionizing cybersecurity. However, AI is also being used to create intelligent malware and attacks, which can bypass the most up-to-date security protocols, making it a double-edged sword. On the positive side, AI-enabled threat detection systems have the ability to predict new attacks and immediately notify administrators in case of a data breach.

Making Pivotal Power Moves with AI/ML in Software Security

In today's landscape where cybersecurity threats evolve rapidly, AI/ML offers a game-changing approach to security. Ensure your organization's resilience in the face of ever-evolving cyber threats with an automated power shift. From their remarkable threat detection capabilities to their predictive analysis and adaptability to emerging threats, discover how you can pivot with AI/ML to empower your security measures.

Data-Centric Security: Safeguarding the Cloud Era

2:40 PM-2:55 PM

In the cloud era, data-centric security is paramount to safeguarding sensitive information. Traditional security measures are inadequate in protecting dispersed data. In this session, we will discuss the principles of data-centric security, such as data discovery, access controls, and data classification. Prioritizing data protection optimizes resource allocation, improves incident response, and builds trust with stakeholders in today's data-driven world.

PANEL

Digital Transformation

3:00 PM-3:45 PM

CIOs & CISOs play a crucial role in driving their organization's digital transformation efforts. The COVID-19 pandemic has accelerated the adoption of digital technologies, and CIOs & CISOs must continue to lead the way to stay competitive and meet the evolving needs of customers and employees. This requires a deep understanding of the organization's goals, processes, and IT infrastructure, as well as collaboration with other business leaders. By successfully leading digital transformation, CIOs & CISOs can position their company for long-term success in a digital world.
