

AGENDA

Securing AI Applications: Understanding the New Attack Surface

Executive Dinner

SPEAKERS

Ash Jackson
Operational Director
UK Ministry of
Defence

Agwu Nwoke
Industry Security
Programme
Director
GSMA

**Santiago
Castro Varela**
Director, Data & AI
Strategy
Pay.UK

**Bruna
Stradiotto**
Assoc. Director - IT
Security & IT Risk &
Deputy DPO
Canary Wharf Group

Vikas Sharma
SVP Engineering /
CTO
Hargreaves
Lansdown

Adam Knubley
Head IT
E.A Gibson
Shipbrokers Ltd

Ludwig Keyser
Head Information
Risk Management
Rothesay

**Natasha
Davydova**
CIO
Centrica

SECURING AI APPLICATIONS: UNDERSTANDING THE NEW ATTACK SURFACE

July 21, 2026

6:00 PM-9:30 PM

Western European Time

AI hasn't just changed how we build, it's fundamentally reshaped the attack surface. Today's AI applications are dynamic, interconnected systems spanning models, data pipelines, agents, and cloud infrastructure—introducing new and often invisible paths for risk. In this session, we'll break down where risk actually exists across modern AI applications and why traditional security approaches fall short. You'll learn how leading teams are evolving their approach to gain end-to-end visibility, prioritise real risk, and protect AI systems across code, cloud, and runtime. We'll also explore how to move beyond fragmented tooling to better understand attack paths, reduce noise, and secure AI at the speed it's built.
