THE AI READINESS IMPERATIVE: WHY AI WON'T OUTPERFORM YOUR DATA

July 28, 2026
5:30 PM-9:00 PM
Eastern Time

Enterprise leaders face immense pressure to deliver immediate AI results, yet moving from promising pilots to measurable business value remains a critical hurdle. The bottleneck isn't the sophistication of the AI model itself - it’s the maturity of the underlying data layer. When an organization builds advanced AI on a fractured foundation, the result is inevitable stall. Join an exclusive group of data, analytics, and technology executives for a candid dinner and peer discussion on what it truly takes to de-risk enterprise AI from the foundation up. Together, we’ll cut through the AI hype to examine the architectural decisions, semantic governance, and data lineage required to move from data chaos to trustworthy, autonomous agentic systems. We will confront the hidden risks in current AI strategies, share real-world roadmaps to overcome organizational friction, and leave with the actionableinsights required to scale your enterprise AI with absolute confidence.
