The Role of Mentoring & Sponsorship in Advancing Women Leaders

How do we come together, as a group of professionals, to create and foster an inclusive business world where all women have a role to play? We know that a major part of this is attracting and retaining talent at every level but how exactly do we do that and where can we use technology to help? Our panelists will discuss how their companies are creating more inclusive environments, the use AI tools to help uncover hidden biases, what flexibility looks like for all team members and how they are advancing women earlier and signing them up for long term success.

AI Literacy as a Catalyst for Enterprise Transformation in UN Peace Operations

As artificial intelligence continues to transform industries globally, fostering AI literacy within United Nations peace operations has become imperative for driving innovation, enhancing decision-making, and advancing mission mandates. This session explores how building a culture of AI awareness and understanding across multidisciplinary teams can unlock the full potential of emerging technologies to strengthen operational efficiency, enable data-informed insights, and support conflict prevention and resolution strategies.

AI literacy has been prioritized across peace operations through targeted training initiatives and practical workshops designed to empower personnel to integrate AI meaningfully into their workflows. A phased introduction of AI-enabled digital tools has allowed teams to experience tangible benefits, including enhanced collaboration, increased productivity, and improved information management.

These efforts are part of the broader implementation of the Digital Transformation Strategy for UN Peacekeeping, which aims to modernize operations and better equip missions to meet complex challenges on the ground. They are also aligned with the Secretary-General's UN 2.0 vision, which calls for a more innovative, data-centric, and future-ready United Nations.

Simultaneously, work is underway to develop secure and contextually relevant large language model (LLM) capabilities tailored to the unique needs of peace operations. These initiatives are guided by a strong commitment to data privacy, information security, and the responsible use of AI—fully aligned with UN policies, ethical standards, and regulatory frameworks governing the handling of sensitive information.

By embedding AI literacy institutionally and enabling the responsible adoption of transformative technologies, peace operations are advancing a culture of informed innovation that supports the UN's mission of peace, security, and sustainable development in an increasingly digital era.

The Vulnerable C-Suite: Why Personal Cybersecurity is the New Frontline for CISOs

Businesses and their leadership teams are increasingly being targeted – physically and digitally. Research from The Ponemon Institute shows that 42% of CISOs report attacks targeting executives' personal lives – a number that will only climb as cybercriminals evolve their attack methods.

Cybercriminals are increasingly leveraging executives' personal digital presence as an entry point into corporate networks. Traditional cybersecurity focuses on corporate systems, leaving executives' personal digital lives exposed – creating a significant risk vector for organizations.

Creating From Within Vs. In Reaction To

An empowered woman writes her own life story, but it's easy to become reactive during chaotic times and feel like life is happening to you instead of for you. Jessica shares how she transitioned from a reactive mode of living to empowered co-creation by honoring her inner knowing over external circumstances. This shift enabled her to leave a life that wasn't fulfilling and move towards her dreams. In unstable times, she emphasizes the importance of remembering that the truth in your heart is more real than what you see. In this short talk, Jessica will explain how to use this mantra to co-create through principles like Intention Alignment and Maintaining Presence.

2:20 PM-3:00 PM

2025 Executive Evolution: Mastering the Art of Business, Marketing and Technology Harmony

Bridging the gap between business marketing and technology is not easy and requires discipline and balance between technology, people, and business. For so many organizations today, technology is the business. Technology needs to be understood as a critical enabler in every part of the organization from the front line to the back office. It creates new value by crunching data to deliver new insights, it spurs innovation, and it disrupts traditional business models.
For business and technology leaders alike, new actions and behavioral changes can help their organizations make this shift. CIOs and CISOs must take responsibility for problems, they should convey that when technology fails, many people typically share responsibility.

Revolutionizing Customer Journeys: Advanced Strategies for CMOs to Enhance and Optimize the Customer Experience

In today's fast-evolving digital landscape, CMOs and Marketing leaders are under increasing pressure to deliver exceptional customer experiences at every touchpoint. This panel will explore cutting-edge strategies and advanced technologies that are shaping the future of customer journeys. Experts will discuss how marketing leaders can leverage data-driven insights, personalized engagement, and omnichannel marketing to enhance customer satisfaction, loyalty, and lifetime value. Attendees will learn how to optimize the customer experience by aligning their marketing efforts with evolving consumer expectations, breaking down silos across departments, and driving seamless interactions that foster long-term relationships. Whether it's utilizing AI-powered tools, incorporating voice-of-the-customer feedback, or refining content strategies, this session offers actionable insights for CMOs looking to stay ahead in an increasingly competitive market.
