DOES THE THREAT OF RANSOMWARE KEEP YOU AWAKE AT NIGHT?

September 28, 2022
5:30 PM-9:00 PM
United Kingdom Time

CISOs face a huge headache trying to understand how to know when they were attacked, what data attackers have corrupted, how quickly can they recover and do they have to pay a ransom to get the data back? Ransomware remains a significant challenge for companies, not simply because it has become ubiquitous, but also because of the significant impact a single ransomware attack may have including companies or customers that rely on the attacked company. Cybersecurity and risk management have always been vital for the flow of any business. However, the current condition of the global supply chain makes it exceptionally vulnerable to severe damage from an attack. When the supply chain is barely getting by, criminals are more likely to assume they have leverage over businesses. A ransomware attacker may be more brazen and exercise higher demands than they might have a few years ago.
