THE GLOBAL STATE OF CPS SECURITY 2025: THE BUSINESS IMPACT OF OT DISRUPTIONS

January 22, 2025
6:00 PM-9:30 PM
Central European Time

Cyber-physical systems (CPS) are increasingly becoming the target of sophisticated cyberattacks, posing significant threats to business continuity, national security, and economic stability. As these systems govern critical infrastructure and operational technology (OT), disruptions carry severe business and financial consequences, highlighting the need for executive attention and proactive mitigation strategies.

This session will present key insights from a global survey of 1,100 cybersecurity professionals, providing a comprehensive look at the business impacts and operational disruptions caused by CPS-targeted cyber incidents. We will explore these trends, emphasizing the critical role executives play in safeguarding CPS environments to prevent business disruptions and protect organizational resilience.
