# Proactive, Integrated Security

Elevate your defenses with AI-integrated Security Solutions. Comprehensive security portfolio to manage risk, maintain trust & minimize disruption.

We help customers build cyber resilience via a holistic security portfolio across the pillars of threat prevention, detection and response, recovery, investigation and compliance, Customers benefit from smarter solutions powered by real-time, contextual threat intelligence and high efficacy security protection.

Application security

Data privacy and protection

Identity and access management

Security operations

Threat detection and response

Digital investigations and collection

Holistic app security that builds software resilience

360° analytics for threat detection, hunting, and response

Unified data discovery, protection, and governance

Our holistic portfolio

Full-spectrum threat detection and seamless response

Comprehensive identity and access services

Collect, process, analyze, and report on digital evidence

Why choose OpenText?

High Efficacy Solutions

We deliver High Efficacy security solutions with unmatched threat visibility, proactive monitoring and automated protection

Advanced AI & analytics

With integrated AI & analytics we help detect anomalous behavior and deliver faster incident response to effectively prioritize risk and reduce breaches

Real-time Threat Intelligence

Our real-time contextual threat intelligence acts as the foundation for our portfolio enabling unmatched threat insights and helps anticipate/adapt/evolve with new threats

AI-Ready and Compliant

We help secure sensitive information/ access violations/ application vulnerabilities to establish foundation for secure AI-adoption

End-to-end Cyber Resilience solutions

We help improve security posture and integrate security across business functions, roles and processes to drive governance

Application Security

Great code is secure code

In the dynamic landscape of application security, the paradigm is moving from "shift left" to "shift everywhere." Developers must manage infrastructure configuration and security in this "everything-as-code" era, and OpenText™ Fortify™ makes that an easy journey—whether you're just starting out or are ready to mature your AppSec program.

## Code security for your every need

APIs	Web Apps	Mobile Apps	Containers	Infrastructure as Code	Clients and Embedded

Analytics and Reporting

Fortify Platform

Services

SAST · MAST · Smart Contract · SCA · DAST
SCS · IaC Security · AI Security · Container Security · API Security

33+ Programming Languages | SDLC Integrations

Deployed Anywhere

Train · Design · Code · Commit · Build · Test · Stage · Production · Audit

Undisputed leadership | Proven expertise | Passion and pride

Build resilient software with Fortify

Fortify enables you to build software resilience from an industry-leading AppSec partner you can trust. Fortify static, dynamic, interactive, and open-source security testing technologies are available on premises, SaaS, or as a managed service—offering organizations the flexibility they need to build an end-to-end software security assurance program.

Explore our portfolio

Fortify on Demand

Holistic, inclusive, and extensible application security solution to orchestrate and guide your AppSec journey.

Debricked

Take full control of security, compliance and health with a toolkit that will revolutionize the way you use open source.

Fortify Static Code Analyzer

Automated static code analysis helps developers eliminate vulnerabilities and build secure software with Static Code Analyzer.

Fortify WebInspect

Identify vulnerabilities in deployed applications and services with WebInspect dynamic application security testing (DAST).

Why choose OpenText Fortify?

Undisputed market leader
The only AppSec solution recognized as a market leader by Gartner, Forrester, IDC and G2.

Broad language support
Fortify is known for providing the broadest language & framework coverage with the most accurate results.

Innovation and flexibility
Fortify offers the most flexible portfolio in the industry and is recognized for our innovation using AI for static auditing and open-source health.

"Once we saw what Fortify on Demand was capable of, we knew it was the solution for us."

Jair García Osorio

Chief Technology Security Officer, Coca-Cola FEMSA

Data Discovery, Protection and Compliance

Discover, classify, and secure sensitive and high-value data

In today's data-centric world, businesses require a unified platform for robust security, privacy preservation, and comprehensive data governance. The OpenText™ Voltage™ Fusion Data Security platform empowers organizations to confidently safeguard their most valuable assets. With its advanced capabilities, organizations can ensure a resilient and protected data security posture.

Privacy begins with data discovery. Know your data, protect what matters most, and safely use data with privacy by default.
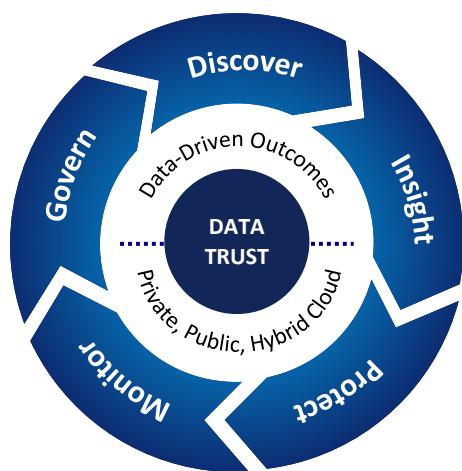

Unified platform for data discovery, protection and governance

As a critical foundation that empowers organizations to address multiple use cases and needs across data security, privacy, and governance, our end-to-end Voltage Fusion Data Security platform provides significant advantages through its cloud architecture that delivers unified set-up, discovery, classification, and management, as well as centralized analytics and high scalability. Our integrated platform approach is flexible and easily grows with your company's needs.

Explore our portfolio

Voltage Fusion Platform

Find sensitive data anywhere and provides direction to be secure and compliant with context-aware discovery and risk scoring of PII, IP and high-value datasets.

Voltage SecureData

Follow a data-centric protection model that persists wherever that data goes with Innovative field level, format-preserving data tokenization with stateless key management.

Voltage Structured Data Manager

Manage structured data over its entire lifecycle. Providing data discovery, insight, data protection, management, and data privacy while reducing TCO of application infrastructure.

Voltage Data Access Governance

Protect sensitive data wherever it flows across hybrid multi-cloud IT. Enable data privacy and place policies to manage and protect it from unauthorized access.

Why choose OpenText Voltage?

Holistic approach Our integrated approach ensures the discovery, protection and privacy of data while maintaining efficient governance practices.

Risk prioritization Unlock deep insight across the entire data estate and manage data security posture through Its lifecycle.

Data protection at scale Our straightforward set up and configuration streamlines the management process, enhancing overall management efficiency.

"Voltage Fusion allows us to effectively find and understand our data risk. The insights…from the analysis are invaluable in taking effective actions to protect our data and watch it going forward."

Identity and Access Management

Leverage identity to enhance productivity, increase security and energize your business

In today's competitive market, businesses often struggle to govern their identities; enabling easy and secure access while seeking greater visibility to enforce compliance and proper governance in their environment. We believe identity powers business and turns access management challenges into opportunities. Discover the industry's leader in identity and access management (IAM)—OpenText™ NetIQ™.

IAM for every use case

Least privilege

Adaptive access

Multi-factor authentication

API monitoring & control

Administrative control

Zero trust

IDENTITY POWERED BUSINESS

We offer a comprehensive set of IAM services for both employee and customer identities. With its wide range of identity and access services, NetIQ's IAM platform helps organizations manage all their digital identities, ensuring that only authorized individuals have access to the resources and systems they need.

Explore our portfolio

NetIQ Access Management

Deliver simplified, secure access to the right users, regardless of the device type or location, and minimize risk to the organization.

NetIQ Identity Governance & Administration

Govern access to resources, adapt to risk, and improve business agility with a comprehensive IGA platform.

NetIQ Privileged Access Management

Gain visibility and control of privileged user activities to deliver actionable security intelligence and quickly address evolving threats.

NetIQ Policy Orchestration

Centralize delegation and administration of policy controls across your hybrid IT environment.

NetIQ Data Access Governance

Gain the same level of control over unstructured data as you have with services by extending your identity governance to documents and files.

Why choose OpenText NetIQ?

Comprehensive IAM portfolio

Loosely-coupled IAM Services that are tightly integrated with a broad range of features supported via its strong policy management.

Real-time, event-driven architecture

Orchestrate and automate change across diverse, distributed environments at scale.

Strong governance

Enforce policies and compliance regulations by effectively managing user access, provisioning and deprovisioning.

"We've worked with the NetIQ identity and access management solutions for the last 20 years and felt NetIQ Identity ticked all required boxes. We introduced it in a proof of concept and beat the other vendors in the mix."

ArcSight Intelligence

Find threats fast with AI-powered anomaly detection

OpenText™ ArcSight™ Intelligence finds the threats that matter to your organization—whether from external or internal sources. ArcSight Intelligence's unsupervised machine learning models, combined with a streamlined experience requiring minimal user interventions, accelerate threat detection and investigation from weeks to minutes. Our unique approach empowers your security operations to perform at speed and at scale.

Threat detection for every use case

Insider threat detection

Targeted attack detection

Sensitive data and IP protection

Endpoint detection and response

Optimizing security operations

Compromised account detection

Threat hunting lead generation

Powerful capabilities

Automated anomaly detection

Distills billions of security events into a few high-quality threat leads for your threat hunters to investigate.

Efficient anomaly validation

Easy-to-understand results from security AI enable your threat hunters to efficiently validate detected anomalies.

Advanced baselining

Learns your organization's "unique normal" by building risk profiles around each user, machine URL and entity.

Intelligent risk scoring

Prioritize your threat investigations with automated and intelligent risk scoring.

Why choose ArcSight Intelligence?

Insider threat defense
Provides advanced threat detection for supporting insider threat programs to protect against IP and data theft.

Flexible deployments
Deploys on-premises, private cloud, SaaS, and SaaS with CrowdStrike Falcon® and Microsoft Defender integrations.

Lower security costs
Improves analyst efficiency and automates manual threat hunting tasks with security AI.

"ArcSight Intelligence identified a local service account used to successfully access certain resources, even though most of its authentication attempts failed. We believe this was a reconnaissance activity that could have resulted in data theft. Thanks to ArcSight Intelligence this is currently under investigation."

Digital Investigations and Forensics

Get to the truth faster with reliable investigation results

Organizations now hold nearly all of their data in electronic format, driving the need for a more cost-effective and efficient business process to conduct investigations and forensic analysis. OpenText™ EnCase™ Digital Investigations and Forensics solutions help collect, process, analyze and report on digital evidence for faster, more thorough results. With OpenText, organizations gain a process that's quick, efficient, repeatable and defensible.

Close cases quickly with reliable digital forensic investigation

Find relevant evidence anywhere

Improve investigation efficiency

Improve public safety and protect your business

Close cases quickly

Explore our portfolio

EnCase Endpoint Investigator

Conduct internal investigations to discover behaviors that put corporate assets at risk.

EnCase Information Assurance

Preview, collect and preserve data to enable defensible collection and automate investigation workflows

EnCase Forensic

Close cases quickly with reliable digital forensic investigation results.

EnCase Mobile Investigator

View, analyze and report on mobile evidence involved in an investigation.

Why OpenText EnCase?

Proven expertise
Provides confidence of using collections technology and audit trails from the pioneer in forensically sound collections.

Unmatched performance
Scale from just a few to many collections with a defensible and repeatable process.

Superior efficiency
Automate workflows and create templates with an easy-to-use interface that allows teams to do more with fewer resources.

"OpenText EnCase is the tool of choice because of the security in capturing data. We can easily reach out via our remote connection and get information before it's destroyed. We initially got OpenText EnCase so that we could do investigations, but it has branched out into us using it for litigations and open records."

Network Detection and Response

Harness unparalleled network visibility to efficiently hunt for and defend against threats

OpenText™ Network Detection & Response (NDR) fuses detection, forensic analysis and proactive threat-hunting to provide high-performance enterprise security teams with full visibility. Leverage signature inspection, stateful anomaly detection and machine-learning-powered malware conviction to quickly defend against both known and hidden threats.

## Identify and eliminate blind spots in the network

Real-time network visibility & metadata

Full-spectrum threat detection

Effective forensics & threat hunting

Seamless response & integrations

Powerful capabilities

Deploy immediately

Begin operating in minutes with a single, software-based, hardware agnostic appliance and self-configuring system.

Detect in real-time

Inspect network traffic from every angle with a multi-faceted suite of best-in-class threat detection.

Gain clarity

Leverage customized, easy-to-manage dashboard views to see everything that matters most in your network.

Advanced threat hunting

Conduct retrospective network traffic analysis and historical data testing to find threats that infiltrated an environment before known indicators were available.

Why OpenText NDR?

Unmatched performance Readily scales as needed without restriction to number of sensors.

Effortless integrations Easily integrates with SIEM, SOAR and your other existing security tools.

Simplified management Analyst workflows and customizable dashboards empower your investigations and threat hunting.

"Thanks in large part to OpenText NDR, we can now detect and correlate events, investigate the data, and notify the client in an average of just 6.5 minutes—less than half our SLA"

Jeremy Conway
CEO, MAD Security

Threat Detection and Response

360° analytics for threat detection, hunting and response

When it comes to threat detection and response, every second matters. OpenText™ solutions dramatically reduce the time to detect, triage and respond to cybersecurity threats in real-time and at scale.

Threat visibility, detection and response

Real-time threat detection

Adversary signal analytics

Security orchestration automation & response

Behavioral analytics

Log management & compliance

Security open data platform

Boost your security operations faster incident response

Discover, define, and contextualize threats for advanced awareness of attack patterns, and threat actor attribution with our tailored solutions. Quickly process and alert analysts to threat-correlated events utilizing an industry-leading correlation engine. Harness the power of behavioral analytics identifying hidden threats and anomalous behavior and Pre-empt elusive attacks with rule-free anomaly detection that dynamically adapts to changing conditions and emerging threats. Simplify incident response management with smart automation and easy collaboration.

Explore our portfolio

Enterprise Security Manager

Real-time threat detection, analysis, and response in a powerful, adaptable, and comprehensive SIEM solution.

ArcSight Intelligence

Advanced threat detection using behavioral analytics to detect insider threats and advanced persistent threats (APTs).

ArcSight cyDNA

Awareness beyond your perimeter, specific and actionable intelligence for complex operating environments.

Why choose OpenText Cybersecurity?

Comprehensive analytics for visibility

Real-time correlation + big data analytics + behavioral analytics = contextually rich insights.

Faster threat detection

Quickly and accurately surface threats and gain contextual information well before an attack reaches its target.

Increase operational efficiency

Discover hard to detect unknown threats and dynamically adapt to evolving threats.

> "Great ArcSight data compression ratios means that we can process higher event volumes per second helping our clients save data storage and networking costs, resulting in lower total cost of ownership."
