It's Time to Change the Way You Think About Purchasing DDoS Protection

Today's the day.

You've recognized the need for distributed denial-of-service (DDoS) protection. But then, hesitation creeps in. Questions like the following, start to pop up.

> **?** **Can I really get the right technology to give me immediate and accurate indication of an attack?**

> **?** **Is this the best long-term solution for my business?**

These concerns are totally valid. Just as you work hard to keep your business ahead of the competition, protecting your network from service outages is also essential.

Traditional solutions often require heavy investments in specialized hardware, leading to high capital expenditures (CapEx) and added complexity. But that's the old way of doing things.

What if we told you there's a modern business protection solution that's not just effective but also incredibly clever?

We don't care what your network looks like - we work with what you have.

While others force you to adapt to their product limitations and business models (like the need for scrubbing centers), we focus on providing a solution that adapts to your needs.

Do we have your attention yet?

We're here to show you how we can fit seamlessly into your existing setup and add real value – not just by giving you another shiny widget, but by enhancing the tools you already have.

Learn More

Let's get straight to the point.

Can you leverage your existing infrastructure? Absolutely.

Every network is unique. Whether you manage data centers, cloud environments, or a hybrid of the two, seamless communication is essential. But what about when you introduce new technology into your existing technology stack, does it disrupt your operations? Our solutions are designed to adapt, integrating effortlessly with your existing setup to boost efficiency across the board. With our approach, there's no vendor lock-in—whether your solution needs software only or hardware as well, you'll enjoy the same real-time protection, regardless of your architecture.

Wondering about AI and threat intelligence?

Our top-tier, automated defense system is ready to handle existing, new, and zero-day DDoS attacks right out of the box. Leveraging our AI-assisted DDoS Intelligence Subscription provides predictive protection against emerging threats, ensuring constant security. By combining AI's analytical strengths with our 24/7 SOC team's rigorous vetting of all predictive automation and detection rules, customers receive the best possible network protection.

Wondering about day-to-day management?

Simpler is better, right? Our automation and real-time threat detection reduce operational complexity and eliminate the need for your team to monitor traffic 24/7. With no extra hardware required, your IT team can focus on strategic tasks and high-priority initiatives instead of daily DDoS management. Leave it to us – we've got this.

What about working with your existing applications and integrations?

You've already invested in top-tier technologies to defend your network, and there's no need to abandon them. Our solutions seamlessly integrate with your existing infrastructure via API, enhancing your protection capabilities with our real-time attack analysis and intelligence sharing.

This means we make your current tools smarter, more capable, and more protective, increasing the ROI of your investments and adding significant value to your security stack.

Thinking about the long term?

No need to worry about repeating this process every few years. Our solution grows with your business. As attackers evolve, so do our solutions. We continuously enhance them with more intelligence from our global customer data, ensuring you stay ahead of new threats. Scale as much as you want, and we'll deliver class-leading and speedy protection every step of the way.

Concerned about operating expenses (OpEx)?

Our solutions reduce your operational burden and eliminate surprise burst costs or overages. Thanks to our smart automation, you can focus on strategic projects instead of managing complex DDoS technology. Need more coverage? No problem – we've got your back, with no extra hardware needed.

Our solution, in short

Guarantees service availability

Seamlessly integrates with your existing setup

Is hardware-independent

Improves your existing technology stack

Simplifies DDoS management

Frees up resources to focus on your strengths

Scales with your growth

Keeps your costs low and predictable

Let's work together to advance your security.
