Defend Against Identity Breach Using Context, Risk, And Behavioral Analysis

**74%**
of breaches are identity related*
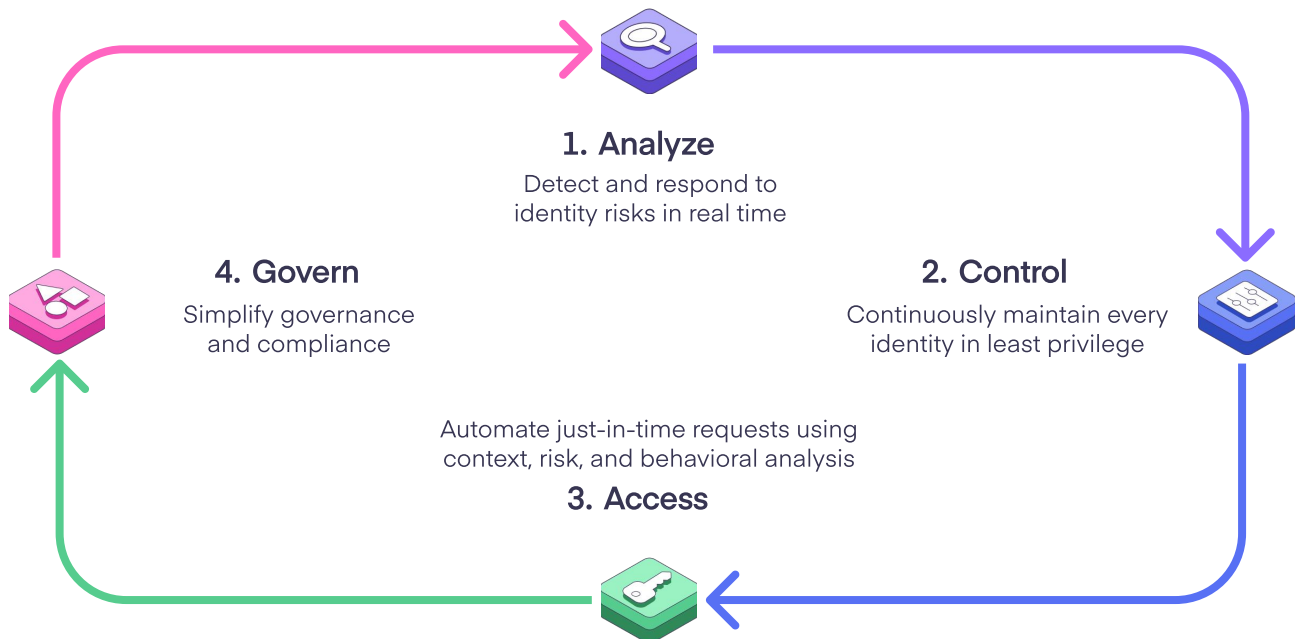

95%
of permissions are excessive caused by manual operations*

$4.5M
average cost of a security breach*

Automate Permissions & Lifecycle for Human & Non-Human Identities with an AI-Powered Identity Security Platform

1. Analyze
Detect and respond to identity risks in real time

4. Govern
Simplify governance and compliance

2. Control
Continuously maintain every identity in least privilege

Automate just-in-time requests using context, risk, and behavioral analysis
3. Access

AI-Powered Security Platform

Analyze

Real Time Risks And Operational Insights

Gain insights from a unified dashboard across human and non-human identities

- Discover identities across rich data sources
- Detect posture, behavioral, and privilege risks

Control

Permissions Management On Autopilot

Reduce your attach surface and eliminate excessive privileges.

Automatically maintain least privilege for each identity based on usage frequency, permission risks, and resource critically.

Access

Automated Just-In-Time Access

The first GenAI-powered just-in-time (JIT) solution.

Leverage risk, context, and behavioral analysis to empower your workforce with frictionless access to the resources when they need them. Identify anomalies with a human-friendly summary of user activities.

Govern

Simplified Governance And Compliance

Take charge of all identities in the organization and simplify compliance.

- Full audit of human and non-human identities
- Automated identity lifecycles
- Intelligent, context-specific user access reviews
