Generative AI Business Assistant POWERED BY AZURE OpenAI

Experience the future of data-driven decision-making with your own Generative AI Business Assistant powered by Azure OpenAI. This powerful production accelerator provides a conversational ChatGPT-like experience while incorporating data governance, a branded user interface, and an Azure OpenAI powered large language model. Most importantly, the accelerator runs inside your Microsoft account, incorporating your governance and security posture, and utilizes your data estate to revolutionize how you interact with your data.

SOLUTION COMPONENTS

Conversational Data Insights

Have insightful conversations with your data. Generative AI Business Assistant understands your queries, provides meaningful responses, and offers data-driven insights in natural language. Whether you're a data scientist or a business leader, accessing and interpreting data has never been more intuitive.

Data Governance and Security

Your data is invaluable, and we treat it as such. With robust data governance features, this assistant ensures that your data is handled with the utmost care. Your data is not available to other customers nor is it used to improve Azure OpenAI LLM models.

Branded User Interface

Make your data interaction environment uniquely yours. Our solution offers a fully customizable and branded user interface, aligning seamlessly with your corporate identity. Say hello to a personalized and engaging data experience.

Cutting-Edge Generative AI by Azure OpenAI

Powered by Azure OpenAI, this assistant leverages state-of-the-art AI capabilities. It adapts and learns from your data, getting smarter with every interaction. We select the right LLM for your unique data set as part of the solution.

OUR APPROACH

Our approach simplifies Generative AI into consumable steps designed to get your first Generative AI Business Assistant into production quickly.

Select Your Assistant: We identify lines of business for your Generative AI Business Assistant launch

Identify Content Repositories: We guide you in selecting the content repositories for your initial Business Assistant launch.

Build & Integrate: We deliver your MVP for pre-production user validation, then take care of selecting the right Azure OpenAI LLM for your use.

Production Launch: We rapidly move to production to help you get value from your data estate and expand to other lines of business.

STARTING OUT WITH GEN AI

Organizations frequently find it difficult to select their initial Generative AI use case and implement it effectively. Presidio deploys a turnkey accelerator for clients to streamline this process and make Generative AI more accessible.

BUSINESS OUTCOMES

Enhanced Productivity: Automation of content generation, data analysis, and decision-making streamlines operations and reduces manual effort.

Personalization and Customer Experience: Gen AI enables personalized content creation and recommendations, enhancing user experiences and customer satisfaction.

Data-Driven Insights: Gen AI generates actionable insights from large datasets, enabling data-driven decision-making.

Competitive Advantage: Leveraging cutting-edge Gen AI technology differentiates you from your competitors.

Scalability and Adaptability: Scalable Gen AI solutions grow with your business, adapting to evolving needs and market dynamics.
